

CREATING A WIRE-FRAME AND SITE- DIAGRAM

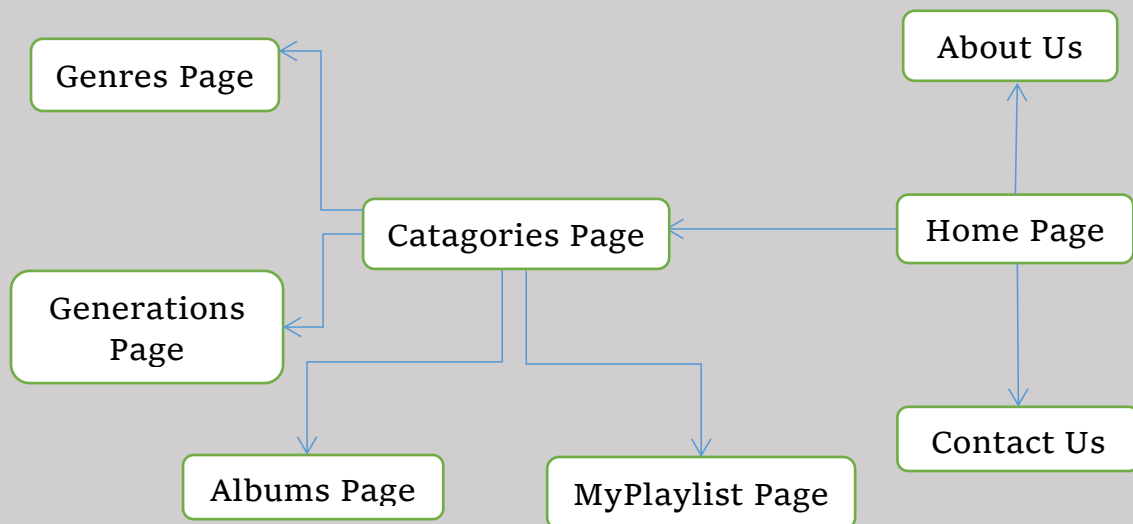

The concept of my website is on the area of entertainment sector, specifically on Ethiopian musics. The idea is created to support the artists on the issues related to copyright and to make musicians well known for their works with every detail description to listeners.

The website consists home page, about us page, contact us page, categories page which consists Ethiopian musics with categories of chronological time(generation), genre and artist(as an album). The home page also consists an image slider of artists with their background and musicological moment of stories.

The low fidelity wire-frame of each page and the site diagram shown below. The UI layout for this low fidelity wire-frame is also attached together with this file.

SITE DIAGRAM
